Professional profile

I have an extensive experience in Full-Stack development. For over 10 years I've been working both on server and client sides of most projects.

Through the years I've built a solid expertise on Java / Spring ecosystems in various industries such as private banking, mobile payment - POS, data & voice encryption ...

The startup world has given me the chance to explore further client side technologies. This is why today I can really introduce myself as a **Full-Stack developer**.

I have contributed to the success of numerous projects in various fields. I believe hard work and passion can make the difference. For more in-depth information on my achievements please consider visiting my website :
